             SEQUENCE 12, Application PC/TUS9310555

GENERAL INFORMATION:
APPLICANT: SILVERMAN, GREGG J.
TITLE OF INVENTION: METHOD FOR STIMULATING PRODUCTION OF
TITLE OF INVENTION: VARIABLE REGION GENE FAMILY RESTRICTED ANTIBODIES THROTTLE OF INVENTION: VACCIMATION WITH A B-CELL SUPERANTIGEN AND CONJUGATES
TITLE OF INVENTION: THEREOF
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches

                                                                                                                                                                                                                                                                                                                                                                               This invention describes novel antibodies that immunospecifically bind to CC Blymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the CC tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory, cc antirheumatic and antiAIDS activity and can be used in vaccines to cinhibit the expression and activity of BLyS. The antibodies bind to BLyS cand so may be used to detect and quantitate the presence of BLyS in CC and so may be used to detect and quantitate the presence of BLyS in CC associated with aberrant expression of BLyS. They may also be cc administered to treat diseases associated with aberrant BLyS expression cf diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, cc acquired immunodeficiency (e.g. common variable immunodeficiency (P.S. common variable immunodeficiency (P.S. represent the antibodies and fragments of the antibodies described in the method cc arthrotics and fragments of the antibodies described in the method

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to human anti-epidermal growth factor receptor single-chain antibodies (anti-EGFR-scFvs) isolated from a human IgM phage display library using EGFR as antigen. Two isolates with different amino acid sequences were identified. The anti-EGFR-scFvs are useful for treating cancer, and for the diagnostic location and assessment of tumour growth, where the anti-EGFR-scFv is radiolabelled. The present sequence represents human anti-EGFR single-chain antibody isolated from clone pSEX81-63.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel purified preparation of a human CC antibody, which binds to a tissue inhibitor of metalloprotease-1 (TIMP-1) CC and neutralises a matrix metalloprotease (MMP)-inhibiting activity of CC TMP-1. The antibody comprises a variable heavy chain (VHC)DR3 region and CC invention has hepatotropic, Cytostatic, nephrotropic and cardiant CC activity. The human antibody is useful for decreasing an MMP-inhibiting CC activity of a TIMP-1. It is especially useful for ameliozating the CC symptoms of a disorder in which TIMP-1 is elevated, e.g. liver CC symptoms of a disorder in which TIMP-1 is elevated, e.g. liver CC syndrome, lupus nephritis, glomerulosclerotic renal disease, idiopathic CC pulmonary fibrosis, benign prostate hypertrophy, lung cancer or colon CC cancer. The antibody is also useful for detecting a TIMP-1 in a test CC preparation, or in diagnosing a disorder in which a TIMP-1 level is elevated. The sequences shown in ABR01502-ABR01545 represent the heavy creation regions of a human anti-TIMP-1 antibody of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AMU02501-AAU02635, and AAU02641-AAU02748 represent the amino acid complements of anti-adipocyte monoclonal antibody heavy chain, light chain, and heavy chain complementarity determining regions (CDR) of the cinvention. The antibodies can be used in the treatment of obesity and complements. The antibodies can be used to deliver drugs or components of the fat mass of an obese patient or the antibody can be used as a therapeutic itself. Antibodies binding specifically to delipocytes can be used to activate the immune system to destroy the cells by complement mediated lysis. The antibodies may be labeled with a complement mediated lysis. The antibodies may be labeled with a complement mediated lysis. The antibodies may be labeled with a complement of dagnosis in human subjects e.g. to determine the cells of determine the presence or level of adipocytes e.g. to determine the complement of adipocytes antigen on the surface of an adipocyte to detect or complement of the presence or level of adipocytes in a cell or tissue sample. The antibodies can be used as an alternative means of treatment for obese patients other than undergoing surgery to remove excess fat. Antibodies complement of adiposite can also be produced e.g. intra-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         TN11 reacts with the long form of human Tenascin-C (TN-C). The epitope recognised by TN11 is located inside domain C of TN-C. TN11 is therefore only capable of recognising TN-C isoforms containing domain C (TN-C). TN11 is useful for detecting the presence of TN-C isoforms in vitro or in vivo for diagnosing pathologies expressing the cTN-C isoforms of TN-C. It is useful for the preparation of formulations for the treatment of human neoplasias.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ligands used for diagnosis and treatment of human neoplasias, capable of identifying the tenascin-C isoform containing domatenascin-C -

The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in abiological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and immunodeficiency (e.g. common variable immunodeficiency (evil) and the antibodies and fragments of the antibodies described in the method of the invention.
                                                                                                                                                                                                            10-JAN-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes novel antibodies that immunospecifically bind to CB Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the CC tumour necrosis factor (TNF) super family and induces B cell CC proliferation and differentiation. The antibodies of the invention have CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory, CC antirheumatic and antiAlDS activity and can be used in vaccines to cinhibit the expression and activity of BLyS. The antibodies bind to BLyS in CC and so may be used to detect and quantitate the presence of BLyS in CC biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be and activity such as cancer, immune, and autoimmune disorders and CC and activity such as cancer, immune, and autoimmune disorders and CC immunodeficiency (e.g. common variable immunodeficiency (CVID) and cquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method of the antibodies and fragments of the antibodies described in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

The human antibody is useful for decreasing an MMP-inhibiting activity of a TIMP-1. It is especially useful for ameliorating the symptoms of a disorder in which TIMP-1 is elevated, e.g. liver fibrosis, alcoholic liver disease, cardiac fibrosis, acute coronary syndrome, lupus nephritis, glomerulosclerotic renal disease, idiopathic pulmonary fibrosis, benign prostate hypertrophy, lung cancer or colon cancer. The antibody is also useful for detecting a TIMP-1 in a test preparation, or in diagnosing a disorder in which a TIMP-1 level is elevated. The sequences shown in ABR01502-ABR01545 represent the heavy chain regions of a human anti-TIMP-1 antibody of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CC This invention describes novel antibodies that immunospecifically bind to E Lymphocyte Stimulator (BLyS) polyopptides. BLyS is a member of the CC tumour necrosis factor (TNF) super family and induces B cell CC proliferation and differentiation. The antibodies of the invention have CC cytostatic, immunosuppressive, immunostimulant, immunomodulatory, CC antirheumatic and antiAIDS activity and can be used in vaccines to CC inhibit the expression and activity of BLyS. The antibodies bind to BLyS in CC and so may be used to detect and quantitate the presence of BLyS in CC biological samples and may be used in this way to diagnose disease CC associated with aberrant expression of BLyS. They may also be CC administered to treat diseases associated with aberrant ELyS expression CC diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, CC immunodeficiency (e.g. common variable immunodeficiency (CVID) and CC acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent CC the antibodies and fragments of the antibodies described in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Matches

                       The invention relates to a novel method for the construction of a library of recombinant antibodies. The novel method comprises clustering variable regions of a collection of antibodies having known 3D structures into at different antibody sequences but with substantially identical main chain conformations. The method is useful for constructing a library of artificial antibodies in silico which provides a structurally diverse and yet functionally more relevant source of antibody candidates which can including small molecules, and biomacromolecules such as proteins, a peptides and nucleic acids. The libraries constructed are useful as a proteins of a constructed are useful as a constructed are 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Constructing a library of recombinant antibodies useful as source antibody candidates for screening antigens comprises clustering variable regions of antibodies having known 3-dimensional structurinto structural ensembles

The invention relates to a novel purified preparation of a human antibody, which binds to a tissue inhibitor of metalloprotease-1 (TIMP-1) and neutralises a matrix metalloprotease (MMP)-inhibiting activity of TMP-1. The antibody comprises a variable heavy chain (VHC)DR3 region and a variable light chain (VLC)DR3 region. An antibody preparation of the invention has hepatotropic, cytostatic, nephrotropic and cardiant

(TIMP-1)

Claim 1; Page 2646-2647; 3148pp; English.

This invention describes novel antibodies that immunospecifically bind to CC B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the CC tumour necrosis factor (TNP) super family and induces B cell proliferation and differentiation. The antibodies of the invention have CC cytostatic. immunosuppressive, immunostimulant, immunomodulatory, compared to and antiALDS activity and can be used in vaccines to CC antirheumatic and antiALDS activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in CC and so may be used to detect and quantitate the presence of BLyS in CC associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression CC and activity such as cancer, immune, and autoimmune disorders and CC immunodeficiency (e.g. common variable immunodeficiency (CUTD) and cc acquired immunodeficiency (e.g. common variable immunodeficiency (c.g. acquired immunodeficiency (PLYD) and cc acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent CC of the invention.

The invention relates to a novel method for the construction of a library of recombinant antibodies. The novel method comprises clustering variable regions of a collection of antibodies having known 3D structures into at least two families of structural ensembles, each comprising at least two conformations. The method is useful for constructing a library of artificial antibodies in silico which provides a structurally diverse and yet functionally more relevant source of antibody candidates which can including small molecules, and biomacromolecules such as proteins, peptides and nucleic acids. The libraries constructed are useful as a source of antibody candidates for further screening for novel antibodies
                                                                                                                                                                                                                                                                                                                                                                Disclosure; Page 98-99; 119pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                            Constructing a library of recombinant antibodies useful as source of antibody candidates for screening antigens comprises clustering variable regions of antibodies having known 3-dimensional structures

(I) is useful a primer or probe for detecting the presence of inhibitory antibodies directed against factor VIII. The polypeptides of the invention and the antibodies generated from them are useful in compositions for neutralizing factor VIII inhibiting antibodies in hemophilia A patients. This sequence represents the human anti-factor VIII antibody clone EL-14 protein which is used in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Example 4; Fig
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human LH13 monoclonal antibody heavy chain variable region.

The antibodies can be conjugated to cytotoxic or cytostatic agents and used to selectively target cancer cells for the elimination of tumours. They can also be linked to diagnostic moieties that allow the imaging of neoplastic cells. Nucleic acids encoding human tumour-specific monoclonal antibodies can be used to express the antibodies and can be recombinantly engineered to produced modified antibodies with higher affinity or higher selectivity for tumour cells. Tumour-specific antibodies were produced by hybridomas that were generated by in vitro immunisation of human spleen cell cultures with breast carcinoma cells. The nucleic acid encoding the monoclonal antibody was then isolated from the hybridoma by RT-PCR. The present sequence was produced by LH13 hybridoma cell line.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
